

Saathvik Kellampalli

B.S Applied AI & Data Science | IIT Jodhpur

Experiential Learning | LeapStart School of Technology

Hyderabad, Telangana, India | saathvik.kp@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

EDUCATION

Degree	Institute	Year	CGPA
B.S in Applied AI & Data Science	IIT Jodhpur	2025 – Present	9.75 / 10
Experiential Learning	LeapStart School of Technology	2025 – Present	—

WORK EXPERIENCE

- **Library Management System — Full-Stack Developer Trainee** [LeapStart] May 2026 – Present
 - Architecting and building a **production-grade full-stack LMS** with React, PHP, and PostgreSQL — handling books, users, issue/return workflows, and DB operations end-to-end.
 - Designed a **normalised relational schema** in PostgreSQL with 7+ tables, foreign key constraints, and indexed queries delivering <50 ms response times.
 - Engineered **REST API endpoints in PHP** consumed by React frontend — separation of concerns enforced from day one.
 - Delivered **responsive, pixel-perfect UI** with Tailwind CSS; implemented real-time search, pagination, and role-based access control.
 - Practising real SDLC: requirements → ERD → sprint-based delivery → code review → deployment.
- **Freelance Data Analyst** [Fiverr] May 2024 – Jun 2024
 - Cleaned and restructured **10+ raw datasets** for clients — removed duplicates, resolved inconsistencies, and standardised formats using Excel & Google Sheets.
 - Delivered analysis-ready datasets that directly fed into client reporting pipelines, earning **5-star reviews**.

PROJECTS

- **LeapStart LMS — Antigravity** [Next.js · Node.js · PostgreSQL · Socket.IO · Redis · AWS] May 2026 – Present
 - Core contributor on **LeapStart** — a next-generation, role-aware educational operating system being built from scratch by Antigravity. Platform unifies chat, learning, scheduling, assessments, attendance, social feed, and gamification into a single, real-time interface.
 - Architected the **full PostgreSQL schema (30+ tables)** — users, roles, batches, courses, chat, attendance, tests, notifications, leaderboards — with UUID PKs, soft deletes, and FK-constrained relational integrity.
 - Contributing to **real-time chat system** (Discord-class): Socket.IO with Redis pub/sub fan-out, sub-50ms message delivery, thread replies, @mentions, @role mentions, code blocks (Shiki syntax highlighting), file attachments, and presence indicators.
 - Building **Attendance Hub** — selfie-based face verification (AWS Rekognition), Haversine geolocation validation (200m radius), session windowing, and offline-resilient IndexedDB fallback; all attendance photos auto-deleted after 24h for privacy.
 - Implementing **Proctoring Engine (4-layer)**: browser fullscreen lock, tab-visibility monitoring, periodic webcam snapshots with AI face detection, and a full proctor event log (TypeScript-typed, JSONB-stored) surfaced via a real-time lecturer dashboard.
 - Platform targets **5,000+ concurrent users** — stateless Fastify API, PgBouncer connection pooling, BullMQ worker queues, TimescaleDB for time-series events, MeiliSearch for full-text search, and K8s-ready containerised deployment.
- **Library Management System** [React · PHP · PostgreSQL] May 2026 – Present
 - Built a **production-grade full-stack LMS** for LeapStart — handling book inventory, user management, issue/return workflows, and admin dashboard with role-based access control.
 - Designed a **normalised relational schema in PostgreSQL** with 7+ tables, FK constraints, and indexed queries; engineered PHP REST API endpoints consumed by a responsive React frontend built with Tailwind CSS.
 - Applied full SDLC lifecycle: requirements analysis → ERD → sprint-based delivery → code review — first end-to-end engineering ownership on a real client deployment.
- **PlayHub — Sports Facility Booking Platform** [Web App · Chatbot · Scheduling] 2025
 - Designed and prototyped a **chatbot-assisted sports facility booking platform** — slot scheduling logic, real-time availability checks, and a frontend interface handling concurrent booking conflicts.
 - Demonstrated **product thinking beyond code**: built user journey flows, conflict-resolution UX, and capacity management — structured using SDLC principles from requirements through prototype delivery.

- **Lexis — AI Note-Taking & Summarisation Tool** *[LLM-Assisted · Python · NLP]* 2025
 - Built an **AI-enhanced academic productivity tool** — integrating LLM-assisted summarisation pipelines to auto-organise lecture notes, extract key concepts, and generate structured study materials.
 - Directly aligned with EdTech product philosophy: solved real student pain points — information overload, unstructured notes, poor recall — through AI workflow automation.
 - Explored **Hugging Face model integration and prompt engineering patterns** to fine-tune summarisation quality per academic domain (engineering, sciences, humanities).
- **Blood Bank Application** *[SDLC Prototype · FRD · Data-Flow Modelling]* 2025
 - Executed **full requirement analysis, Functional Requirements Document (FRD) preparation, and data-flow modelling** — demonstrating structured software engineering discipline before writing a single line of code.
 - Mapped end-to-end donor-to-recipient blood request workflows; produced entity-relationship diagrams and system-context DFDs used for implementation planning.

POSITIONS OF RESPONSIBILITY

- **Gemini Student Ambassador** *[Google]* 2026 – Present
 - Competitively **selected by Google** to represent the Gemini AI ecosystem — engaging with AI initiatives, developer events, and emerging tech communities.
- **Member — Google Student Developer Group (GDG)** *[Hyderabad]* 2026 – Present
 - Active participant in technical workshops, hackathons, and developer-focused community sessions.

ACHIEVEMENTS / EXTRA-CURRICULAR ACTIVITIES

- Represented school in **inter-school cricket competitions** in Hyderabad and was part of a **runner-up cricket team** during schooling.
- Part of a **tug-of-war championship team** during primary schooling, demonstrating teamwork and competitive spirit from an early stage.
- Currently undergoing **badminton training** and actively participating in **weekend sports activities** to maintain discipline, teamwork, and physical well-being.
- Secured multiple **Olympiad achievements and state-level ranks** during schooling across academic and competitive examinations.
- Maintained **720+ GitHub commits** while actively building projects and exploring open-source contribution opportunities.
- Secured **9.75 / 10 CGPA** in Semester 1 at IIT Jodhpur.
- Qualified to **Round 3 — Google BigCode Challenge** — ranked in the **Top 1,500 participants across India**.
- Explored **50+ AI and developer tools** through Product Hunt and Hugging Face — actively tracking emerging technologies and AI ecosystems.

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, SQL	Frontend: React, HTML5, CSS3, Tailwind, Bootstrap	Backend & DB: PHP, PostgreSQL, MySQL, Node.js (learning)
Data Science: Matplotlib, Seaborn, Plotly, Tableau, Power BI	DevTools: Git, GitHub, VS Code, Docker, XAMPP, Linux	AI & Emerging: Hugging Face, Prompt Engineering, LLM workflows

Languages: English (Fluent), Telugu (Native), Hindi (Fluent), German (Basic)
